

Windsor Tooling Services is a partnership of local Tooling companies that can offer products and services for the North American market. We bring 38 years of tooling experience to your doorstep to provide solutions to the Tier 1 and Tier 2 suppliers. We are a strategic sourcing strategy that focuses on providing quality product with unsurpassed service.

Proto Typing: We can provide 3D printed parts, SLA Parts, Silicone Molds, Master Models for Composites, Aluminum Molds, Vac Forming Tools and Low pressure Compression Tools

3D printed Additive Metal inserts with Conformal Cooling and our Patent Pending Nozzle & Runner Cooling Insert. Use of Conformal Cooling can save valuable cycle time while improving the quality and stability of the parts during the molding process. We are able to make these inserts in MS1 (P-20 grade) or t1-64 (Titanium) which can be hardened over 50 RC.

Patent Pending

Injection Molds both Domestic & Offshore: We have multiple shops that can provide new builds, 24/7 emergency repairs, engineering changes & preventative maintenance. We have multiple partners for offshore tooling and provide various cost saving support after shipment saving even more money.

We have multiple partners that can provide you Fixtures & Gauges and can provide the right cost save from a single tool or multiple tool package.

Molding: We have several partners that are IATF certified with machines from 180T to 3,000T located in Ontario & Michigan. Perfect for Tier 2 or Tier 3 operations from service parts to production runs.
